

ABSTRACT

According to various aspects of the invention, a personalized magazine commemorating an event includes a plurality of pages, each of the pages comprising at least one photograph related to the event and textual matter associated with the at least one photograph, wherein the plurality of pages are bound together to create the personalized magazine. According to further aspects of the invention, a method of creating a personalized book describing an event includes the steps of gathering content about the event, inputting the content into a computer to create digital data, processing the digital data to format a personalized event book and printing the personalized event book on a printer.
